

Outline

"DENKA SYTROL MW" is a well-balanced polystyrene (PS) resin, with a high tensile strength as well as good moldability. Overturning the traditional understanding that PS resin is "hard and brittle," this product's applications have been expanded to include large packaging cases (and the like), advancing the world of PS resin, and becoming a synonym for ultra-strong PS.

Features

- (1) Our proprietary macromolecular technologies that transcend the traditional constraints of
- (2) GPPS enable us to achieve high tensile strength.
- (3) It boasts both high tensile strength and good moldability. Our comprehensive production control ensures a consistent quality. It enjoys a good reputation for having no significant quality discrepancies from lot to lot.
- (3) By utilizing these features of MW, it is used as an alternative to some AS resins, etc.

Use

- * Recording media-related items like CD jewel cases, and videotape or audiocassette cases, etc.
- * Refrigerator trays
- * Pet cages
- * Miscellaneous goods/toys
- * Food packaging, etc.
